

For perfect cushion installation on your notebook, download the cushion placement screen image.  
Visit: [www.radtech.us/wildeepz](http://www.radtech.us/wildeepz) - scroll to bottom of page to download appropriate template

Instructions: Visit [www.radtech.us/wildeepz](http://www.radtech.us/wildeepz) and scroll to the bottom.  
Click the appropriate template file to download.

Once downloaded, open the image with Preview.app (included with OS X). Once open, select "Full Screen" for 10.3.9 and earlier, and for 10.4.0 and later select "Slide-Show" from Preview's "View" menu. When finished applying cushions, press the escape key or click close to return the image to window view.

**Series 1** kits contains thin (0.95mm) cushions - Suitable for 13in MacBook, 15in Titanium PowerBook and most PC notebooks. Thin cushions may also be used with Aluminum PowerBooks and iBooks.

**Series 2** kits contain both thin (0.95mm) and thick (1.9mm) cushions.

12 and 14in iBooks, as well as 12 PowerBooks, 15in and 17in PowerBooks/MacBook Pros generally use the thick cushions. 15in Aluminum PowerBooks generally use the thick cushions, but thin cushions may be more appropriate in some cases - test to confirm which fits best on each model.

Use the enclosed wipe to clean the display bezel - wipe dry with a clean cloth. Peel away the red backing and attach the cushions to the bezel at the points indicated on screen template. Install the side and top corner cushions first. Center and press the sticky side to the bezel. Use your thumb and forefinger to 'pinch' the cushions to ensure a good bond.

The top center cushions can be adjusted to optimize latching tension. Moving the cushions inward, towards the latch will tighten things up, and require a gentle squeeze to latch the display. Conversely, locating the cushions further from the latch will lessen the force needed to latch the display. Use the scale on the template to aid in determining the optimal placement for the center cushions - lightly attach these cushions while you experiment with placement. You're balancing free play verses latching slack. A good balance is achieved when light downward pressure is needed to latch the display. When you are satisfied with the action, 'pinch' the center cushions for a good bond.

**17in PB's do well with 3 cushions across the top bezel, 1 at each corner, and 1 in the center.**

If cushions stick, or are cleaned with any fluid, rub a small amount of talcum or baby powder into the cushions.

## Thin Cushions

Recommended for 13in MB, 15in Ti PB & most PCs  
May also be used on Al. PB and iBook

## Thick Cushions

Recommended for Aluminum notebooks and iBooks  
**Do not use on 15in Titanium PB**

### Series 1

Thin cushions only

### Series 2

Thin and thick cushions
